

BWH NIDDK DNA Microarray Biotechnology Center

Call for

Pilot Feasibility Grant Proposals

The Center is soliciting grant proposals for innovative genomic studies utilizing DNA microarrays or related technologies (e.g., SAGE) in accordance with the mission of NIDDK (<http://www.niddk.nih.gov/welcome/mission.htm>). We are particularly interested in proposals from investigators who are interested in utilizing these new technologies to extend the scope of existing projects, younger investigators seeking access to these technologies, as well as individuals interested in pursuing higher risk ideas. The PI must be affiliated with BWH.

Proposals should be a maximum of three pages in length including bibliography and figures. Extensive preliminary data are not required. In addition, a face page sheet indicating title of the project, name of the PI, department affiliation, and contact information should be submitted as requested for NIH grant applications. A biosketch, environment page, and other support pages as for NIH grant applications are also required. No budget or budget justification is needed.

Grants are typically awarded at \$10,000 (direct costs). The start date for the awards is January 15, 2002. Interested candidates should submit their grant application no later than November 30, 2001 to:

Steven Gullans, PhD, Director
Harvard Institutes of Medicine
Room 570
77 Avenue Louis Pasteur
Boston, MA 02115\

Applicants should submit all questions to:

Helen Tu, PhD
Email: htu@rics.bwh.harvard.edu
